

Front-End Test Project

Overview

Hi, If you are seeing this you have successfully reached the stage where we are super interested to get you onboard our team but we aren't really sure how you would handle a real design brief and what kind of output you would give.

So here is how it goes, below is a REAL design brief, go through it, if you have questions, ask them right away, you cannot ask questions later once you have begun working on the project.

Test Task: Website Layout Recreation

Objective:

Recreate the given Figma design as a responsive website layout.

Figma Design: [RYN - Case Study Website](#)

Requirements:

- Develop the layout using **React** and **HTML/CSS**.
- Ensure responsiveness and maintain design accuracy.
- Structure the project for easy testing and scalability.

Deliverables:

- A fully functional React-based webpage replicating the Figma design.
- Clean, well-structured code with reusable components.
- A working test setup to verify functionality.

Good Luck :)
